Mörlenbach, 4. November 2010

CERTIFICATE

We are confirming that all Cork Printing Inks supplied by Weber Produktions- und Vertriebs GmbH will not cause any physical health problems. For the production of the ink, no substances are used that are harmful to health, in particularly in regard to heavy metals.

The amount of ink applied on the corks is so marginal that single pigments cannot leave the dried ink and therefore any health threat can be excluded.

With these features, we comply with the German Foodstuffs and Commodities Act and the Commodities Ordinance which are in accordance with the corresponding terms of the European Community.

In contrast are substances that can migrate from the packaging to the food according to the FDA requirements, i. e. so called „indirect food additives“. Hence, those substances have to be approved by the FDA in each single case.

However, as this situation is not applicable, no FDA approval is required.

Mit freundlichem Gruß
Weber Produktions- und Vertriebs GmbH

Hans Jürgen Stäckler
